Transformer covers IP23

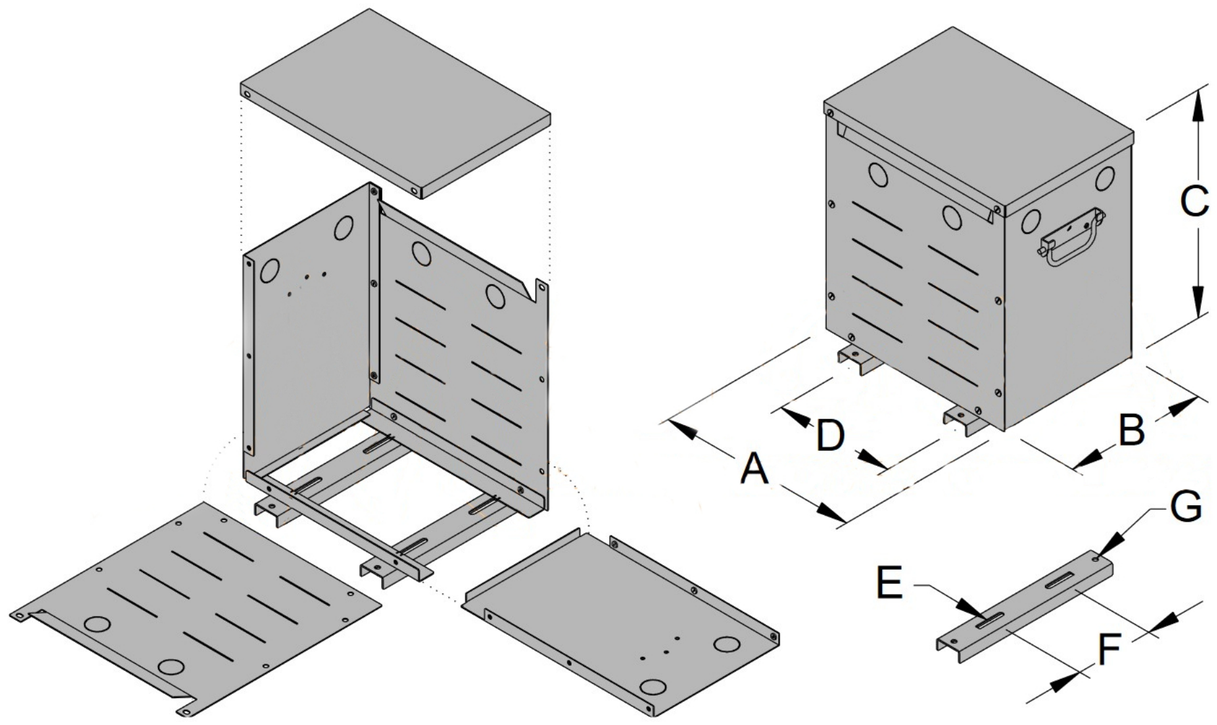

Transformer boxes are designed for vertical mounting of various types of single-phase, three-phase, medical transformers. We offer covers for chokes and transformers that are IP23 rated. They are made of sheet steel, which is powder-coated in RAL 7035. The terminal blocks can be accessed by removing the top cover.

The cover has been designed to ensure good cooling of the equipment inside, while at the same time sufficiently protecting it from harmful factors. The covers are equipped with air vents to ensure proper air circulation inside the cover. Our standard covers for chokes and transformers are IP23 rated and provide protection against both solid objects and splash water 60° vertically.

Upon prior agreement, it is possible to produce a metal cover with dimensions other than those shown in the table.

We reserve the right to changes due to the continuous development of the products offered.

Type	Dimension	Core	Dimensions (mm)							Weight(kg)
			A	B	C	D	E	F	G
